

ECLEVA

Enterprising Use of Technology to Improve
People's Lives

Here are 5 signs that your council needs a technology review

1. System costs appear to be increasing exponentially each year without bringing additional functionality into the organisation.
2. Users have to learn and interact with 5 or 6 different siloed systems leading to reduced productivity and causing onboarding issues for new employees.
3. Employees have difficulty accessing the right resources they need and develop inefficient workarounds which leads to rekeying of data.
4. It is difficult to get real time or consolidated data on critical business processes, as data is hidden in individually created excel spreadsheets and siloed systems.
5. There is confusion around whether the systems comply with the organisation's data security governance.

ECLEVA exists to give clients 20% or more of their working day back

Welcome to ECLEVA

“Founded in 1996, ECLEVA will identify your productivity blockers. We build business line applications that lead to customer satisfaction, team enjoyment, increased productivity, and the confidence to make timely and informed decisions.”

Patrick Northcott, **CEO**

Patrick Northcott

Global CEO, Founder

Patrick is the founder and CEO of ECLEVA. Prior to ECLEVA he was CIO for a large number of corporates supporting business growth through digital transformation

What we offer:

Business Systems Consulting

Our experience helps clients connect the dots between their systems. We help clients align their systems investments to business outcomes. We believe systems need to generate growth not hinder it.

Customer Engagement (CRM) & Marketing Automation

Acquiring a new customer costs 5-25 times as much as keeping one. We help clients aggregate all the information into one central solution so you can have meaningful interactions with clients, prospects and partners.

Rapid Application Development (PowerApps)

We build custom, high productivity business apps for your organisation in days, not months and deploy them instantly across mobile and desktop.

Process Automation (RPA)

If your organisation has extensive repeatable processes, employ a digital workforce independent of human interaction to help your employees work faster.

Business Intelligence (Power BI)

We help you unlock the value of your data assets to give you confidence in decision making. Get the full business perspective – backward and forward looking indicators.

How we do it

We develop solutions for clients ensuring that scope, budget, scheduling and quality are constantly in balance. Our goal is to reduce the time to value and increase client's return of investment, creating frictionless business process and applications fit for purpose.

Prioritised ongoing **roadmap** to ensure clients continue to invest in technologies that deliver value to business.

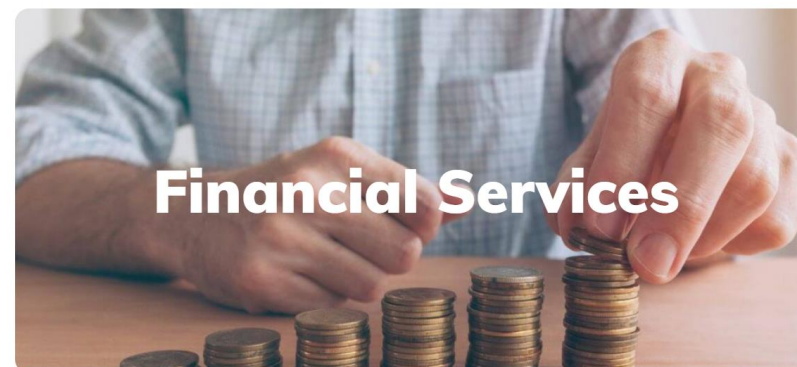

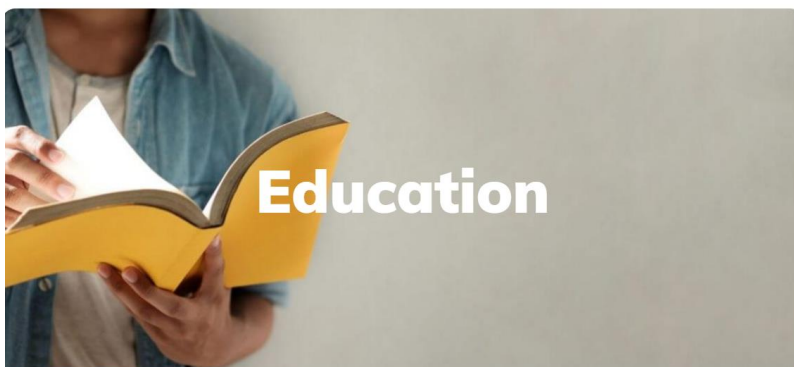

Faster time to **value** through Scrum and Agile practices.

Support and **training** to ensure the team is equipped to use the new systems and processes.
